

MANUAL COUNTER ZD327401

Wachendorff Prozesstechnik GmbH & Co. KG
www.wp-direkt.de
e-mail: RSS@wachendorff.de
Version 2.2

SIZE AND INSTALLATION

TECHNICAL DATA

Operating conditions Operating temperature 0-40°C, humidity 35..95uR%

Sealing Front panel IP65 (with optional gasket), Box IP30, Terminal blocks IP20

Material PC ABS UL94V0 self-extinguishing

Digital Inputs 3PNP/NPN configurable as analogue for potentiometers. (max 28 Vdc in PNP mode)

Outputs 2 relays 5A resistive charge

OUT 24V 30mA(at 24 VAC supply), 40 mA(at 24 VDC supply), 60 mA (at 110 to 230 VAC)

Back-UP Rechargeable battery, approx. 7days autonomy

Power Supply 24...230Vac/Vdc +/-15% 50/60Hz / 2W

INTRODUCTION
Thanks for choosing a Wachendorff Prozesstechnik device. The ZD327401 can be set in 2 different modes: Single or Double counter, all with independent settings. 3 universal digital inputs are available (NPN/PNP/Potential free contact) and can be used for bidirectional encoders reading, UP/DOWN counter function, LOCK/HOLD to lock or hold current visualization. One input is also analogue in order to allow setpoint modification by an external potentiometer.

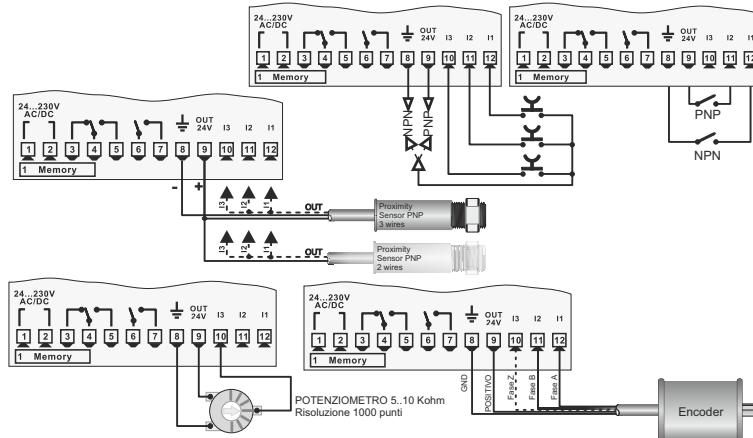

Read carefully the safety guidelines and programming instructions contained in this manual before using/connecting the device. Disconnect power supply before proceeding to hardware settings or electrical wirings. Only qualified personnel should be allowed to use the device and/or service it and in accordance to technical data and environmental conditions listed in this manual. Do not dispose electric tools together with household waste materials in observance of European Directive 2002/96/CE

LED MEANING

	Report the activation of Q1
	Report the activation of Q2
	Report serial transmission by the ZD327401

WIRING DIAGRAM

Potentiometer:

To modify Set1 or Set2 by external potentiometer follow the steps below:

1-use potentiometers 0 to 5/10kohm

2-connect cursor to pin I3; a wrong connection may damage the potentiometer and lead to lock of the device.

3-accuracy on input is max 1000 points, therefore set the parameters "Upper limit" and "Lower limit" with a max difference of 1000 units.

(Ex.: LoS1 to 50,0 and uPS1 to 150,0 to modify preset value related to Set1 between 50 and 150 pulses with steps of one tenth). Greater differences would make unstable the less significant digit.

4-To calibrate the scale of potentiometer enter the configuration mode and select:

Hin.3 as Pot Fin.3 as Set1 or Set2 P.tAr as Enable

Exit configuration mode and place potentiometer at minimum level and press key, then place potentiometer at max level and press premere key: the device automatically exit the calibration procedure.

N.B.: A switch-off of the device would interrupt the calibration.

MEMORY CARD (optional)

Parameters and setpoint values can be copied from one device to another using the Memory card. Attention: Pls. perform first an update of the memory card.

There are two methods:

> **With the device connected to the power supply**

insert the memory card when the controller is off.

On activation display 1 shows and display 2 shows ---

(Only if the values stored on Memory Card are correct).

By pressing the key display 2 shows LoAd

Confirm using the key .

The device loads the new data and starts again.

> **With the controller disconnected from the power supply:**

The memory card is equipped with an internal battery with a life of about 1000 uses.

Insert the memory card and press the programming button.

When writing the parameters, the LED turns red and on completing the procedure it changes to green. It is possible to repeat the procedure.

△ UPDATING MEMORY CARD.

To update the memory card values, follow the procedure described in the first method, setting display 2 to --- so as not to load the parameters on controller.

Enter configuration and change at least one parameter.

Exit configuration. Changes are saved automatically.

LOADING DEFAULT VALUES

This procedure restores the factory settings of the instrument.

SETPOINT MODIFICATION

PRESS DISPLAY

1	Visualizes SETPOINT 1 / 2
2	Modify selected SET
2a	Selects chosen digit
3a	Modify blinking digit of selected SET

LOADING DEFAULT VALUES

This procedure restores the factory settings of the instrument.

LOADING DEFAULT VALUE

PRESS	DISPLAY	DO
1 for 3 seconds	Display 1 shows 0000 and 1st digit flashes. Display 2 shows PRSS	
2	Modify flashing digit and pass to the next one pressing	Enter password
3 to confirm	Device loads default settings	Switch-off and restart the device

MODIFY CONFIGURATION PARAMETERS

PRESS	DISPLAY	DO
1 for 3 seconds	Display 1 shows 0000 and 1st digit flashes. Display 2 shows PRSS	
2	Modify flashing digit and pass to the next one pressing	Enter password
3 to confirm	Display shows first parameter of configuration table Func	
4	Scroll parameters	
5 + or	Increase or decrease visualized value by pressing and an arrow key.	Enter the new data which will be stored releasing the keys
6	End configuration, controller exits from programming mode.	

PARAMETERS LIST

FUNCTION CONFIGURATION

Func	P-01 Counter Function	Counter Functions
Sin	Single (1 Counter)	1 counter functioning
dou	Double (2 Counters)	2 counters functioning

BACKUP MEMORY CONFIGURATION

Pow	P-02 Power-off Memory	Power-off memory
Dis	Disable	No counter stored at power-off
Cnt1	Counter 1	Counter 1 stored at power-off
Cnt2	Counter 2	Counter 2 stored at power-off
All	All Counters	All counters stored at power-off

INPUT CONFIGURATION

Hin	P-03 Hardware input 1	Input 1 Hardware configuration
Hin	P-04 Hardware input 2	Input 2 Hardware configuration
Hin	P-05 Hardware input 3	Input 3 Hardware configuration

NPN

NPN NPN (not available on Input 3)

PNP

PNP PNP

TTL
